

need to converge local guides achievement with TravelQuest XP points and present User landing page, create smart prompt for replit

Here's a concise, smart prompt tailored for Replit Agent to unite Google Local Guides achievements with TravelQuest XP points—and present a vibrant, user-friendly landing page:

Replit Agent Prompt: Converge Local Guides & XP, Landing Page

Objective:

Integrate user achievements from Google Local Guides into the TravelQuest XP system, so that contributions on Google Maps (reviews, ratings, photos, edits, etc.) add to the user's TravelQuest XP and level. Present this unified progress on a gamified, CRED-inspired user landing page.

Requirements

Backend:

- Use `google-local-guides-api` (or similar) npm package to fetch key Google Local Guides profile data (points, level, reviews, photos, edits, etc.) by user-supplied public profile link^[1]^[2].
- On each data refresh, award TravelQuest XP based on Local Guides achievements. For example:
 - Points from reviews, ratings, photos, and edits are mapped to corresponding TravelQuest XP.
 - Consider bonus XP for reaching certain Local Guides levels.
- Clearly document and configure the XP conversion formula, ensuring that achievements on both platforms are rewarded fairly and transparently^[3]^[4].
- Store and update Local Guides stats and last sync time with each user profile.

Frontend/UI:

- On user landing/dashboard, show a unified progress section:
 - User's TravelQuest level, total XP (including Locals Guides contributions), progress bar, and breakdown of XP sources ("Travels", "Local Guides", "Challenges", etc.).
 - Display Local Guides achievements with official icon/badge and highlight their impact on the user's XP and level.
 - Animated and bold "Level Up!" or achievement unlock popups when new Local Guides data increases user XP.

- Add info tooltips describing the connection between Local Guides activity and TravelQuest XP.
- Button or settings card to “Sync Local Guides Profile” and review linked achievements.
- Keep design in a modern, bold, chunked NeoPOP/CRED style: dark mode, vibrant accents, celebratory animations, and clear CTAs.

Extras:

- Gamify further: award in-app badges or achievements for key Local Guides milestones (e.g., “Trusted Reviewer” for 100+ reviews).
- Ensure privacy: integration is user-opt-in, clearly communicates what data is fetched, and updates only with user consent.

Acceptance:

- User’s TravelQuest XP and level increase as Local Guides contributions grow.
- Landing/dashboard visually celebrates all achievement sources, with breakdown and XP animation.
- Experience is clear, user-friendly, and feels cohesive and rewarding.

Prompt Instruction:

Merge Google Local Guides achievements with TravelQuest XP and gamification. When a user links their public Local Guides profile, fetch their latest stats with `google-local-guides-api`, convert achievements to TravelQuest XP, and add to their account. On the user landing page, boldly display combined XP, level, a breakdown of XP sources, and fresh achievement popups in a CRED/NeoPOP-inspired UI. Make integration opt-in and explain data usage clearly.

This will give users a genuinely motivating, seamless landing experience—and reward their full explorer identity!
